

PROPOSAL FOR ISOMORPHIC LABS

Turn Your \$2.1B Series B Into **Data Infrastructure That Scales**

A cloud data & analytics partner for Isomorphic Labs, as IsoDDE scales across every therapeutic program.

THE MOMENT

Put the \$2.1B to Work Before the Data Catches Up

Thrive Capital, Alphabet, GV, MGX, Temasek, CapitalG, and the UK Sovereign AI Fund just backed the next phase of IsoDDE.

\$2.1B

Series B, led by
Thrive Capital

\$2.7B

What this raise means operationally

Scaling IsoDDE across multiple concurrent drug design programs means a step change in structured and unstructured biological data volume, more research sites generating data in parallel, and tighter demands on cost control as compute and data infrastructure spend grows with the pipeline.

Fix the Pipeline Sprawl Before It Slows You Down

Three things tend to break first when a research org scales this fast.

1

Fragmented pipelines

New therapeutic programs and sites each spin up their own data flows, and warehousing struggles to keep pace with the sprawl.

2

Slower decisions

Leadership and research teams need live visibility into program progress and spend, not static reports built days later.

3

Runaway cost

Compute and storage costs scale with every new program unless there is active, built-in cost control from day one.

Scale Every Program on One Data Platform

One platform for warehousing, live dashboards, automated pipelines, and cost control.

- 1 Unified data warehousing** One warehouse for every program and site, so new research lines plug in without a new pipeline build each time.
- 2 Live BI dashboards** Real-time visibility for research and leadership teams, so decisions don't wait on a weekly report cycle.
- 3 Automated pipelines** New data sources onboard in days, not months, so infrastructure scales at the same pace as your pipeline.
- 4 Built-in cost controls** Spend guardrails baked into the platform, so a bigger data footprint doesn't mean a runaway compute bill.

Let Us Handle the Data, So You Can Scale the AI.

A 20-minute call to map your growth to a plan, then a 30-day scale test on your own data.
