POINT OF CONTACT

CONTACT PERSON

CONTACT

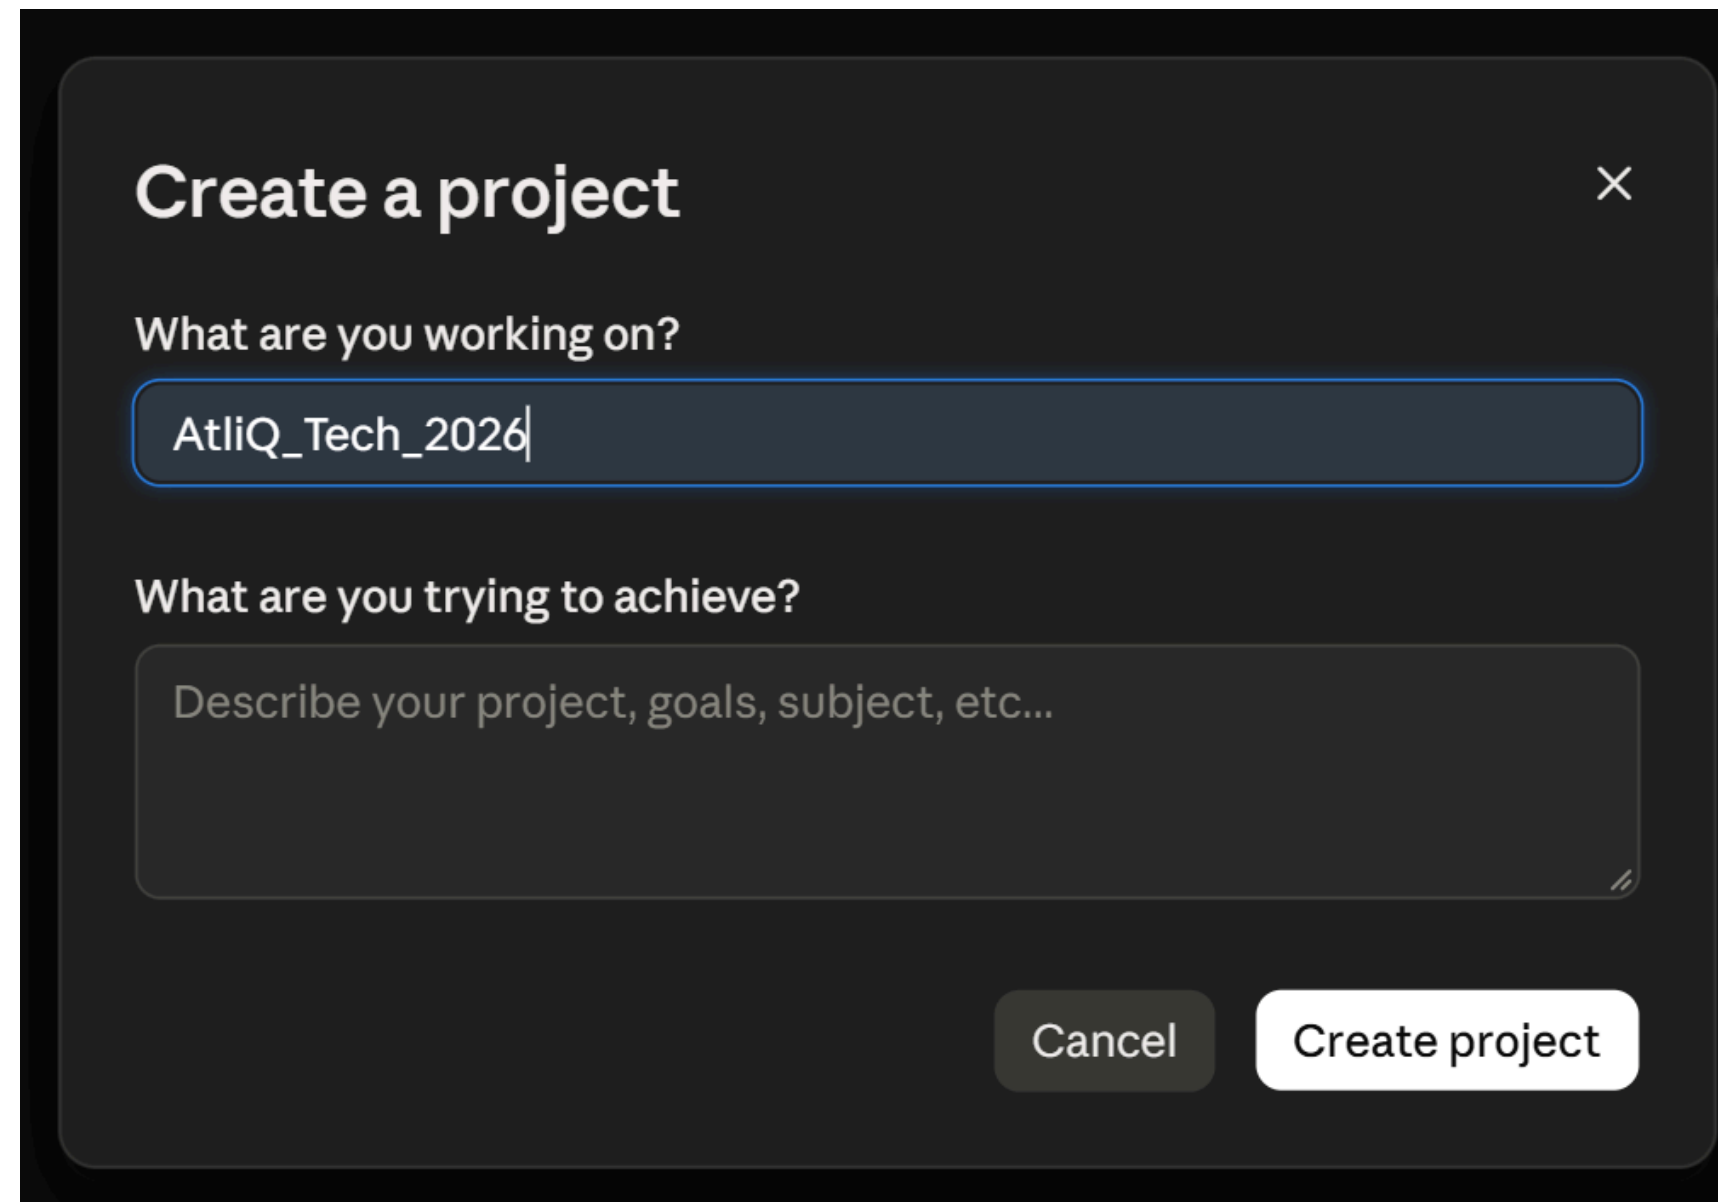

CONTACT NAME

REQUIREMENTS

1. Clean and bring all the customer data into one place
2. See who our best customers are
3. Find which of them just raised money.
4. Pitch them and reach out to them with mail and deck

BUILT PROCESS

Open Claude > Navigate to project > Click + icon

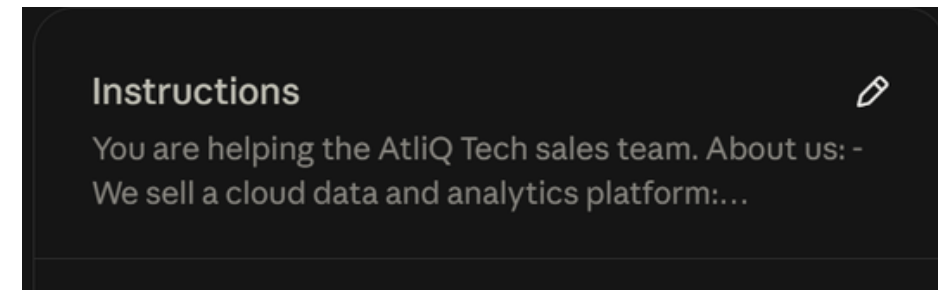

The screenshot shows a dark-themed dialog box titled "Create a project" with a close button (X) in the top right corner. It contains two input fields. The first field, labeled "What are you working on?", has the text "AtliQ_Tech_2026" entered. The second field, labeled "What are you trying to achieve?", has the placeholder text "Describe your project, goals, subject, etc...". At the bottom right, there are two buttons: "Cancel" and "Create project".

For this process i leave the second question blank

BUILT PROCESS

Navigate to instructions

and pasted to text below

You are helping the AtliQ Tech sales team.

About us:

- We sell a cloud data and analytics platform: warehousing, live BI dashboards, automated pipelines, and cost controls.
- Our customers are funded tech startups across sectors like fintech, ecommerce, healthtech, and logistics.
- Our angle: when a customer raises fresh funding they are about to scale, so they will need more data infrastructure. That is our moment to reach out.

How we work:

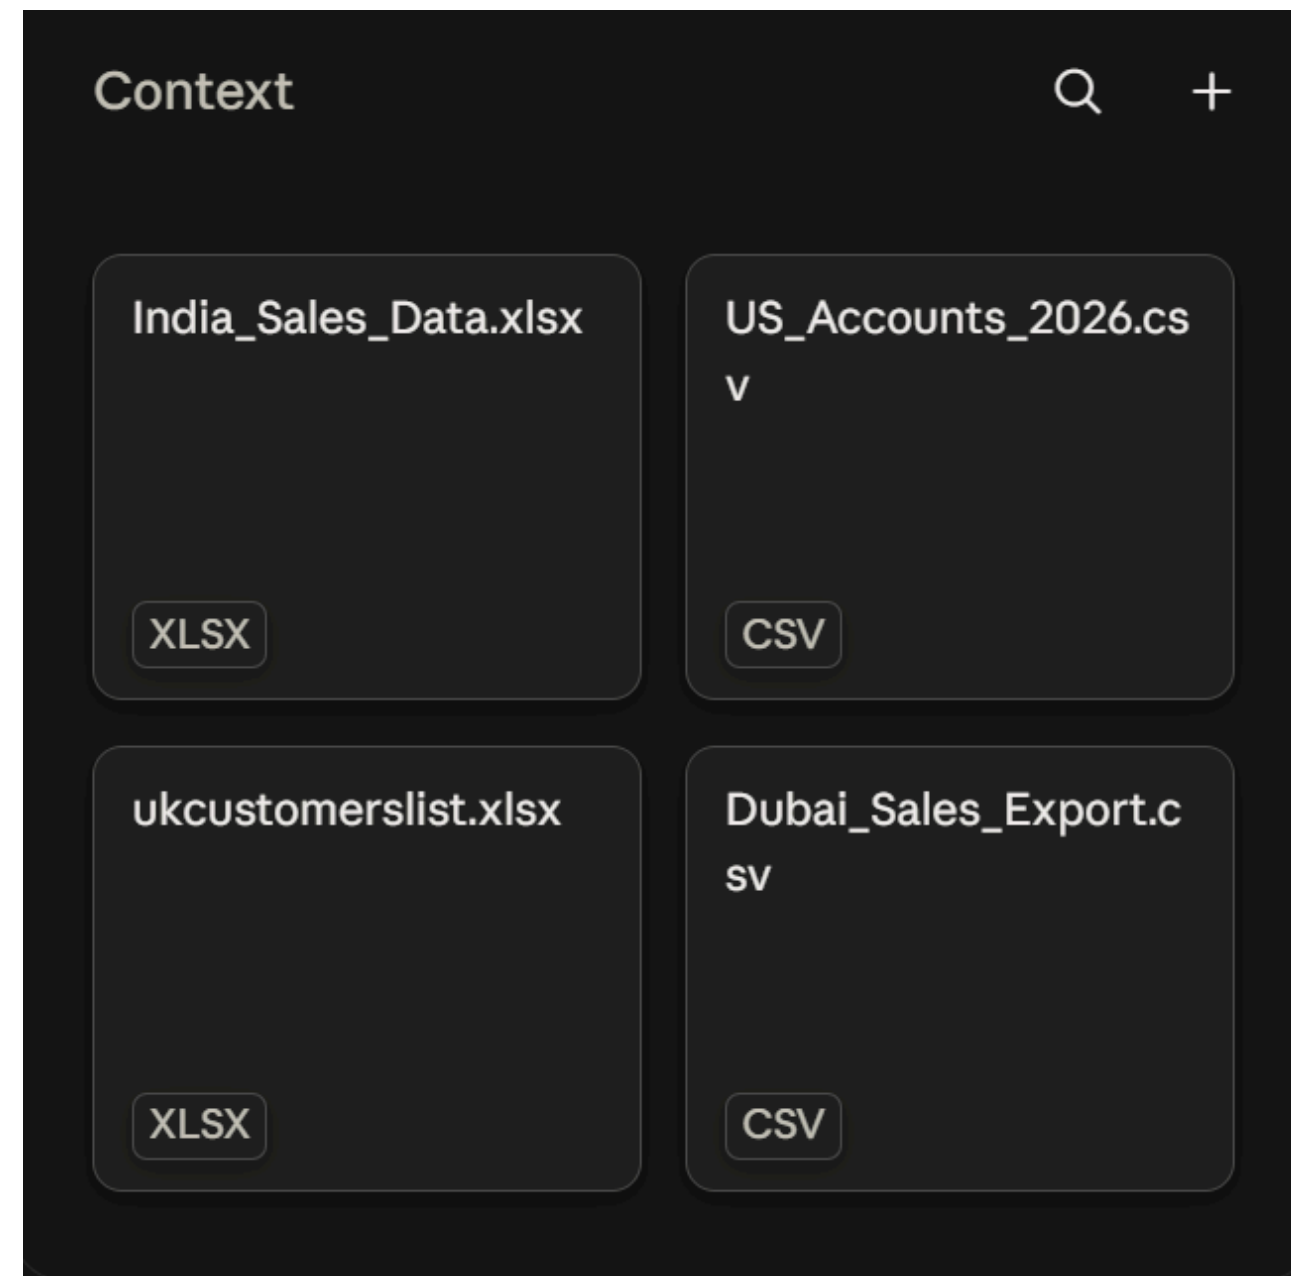

- When a workflow needs to know what we sell, it is the above. Do not ask.
- Default outreach target: the strongest funded Gold tier customer, unless I say otherwise.

Brand and voice:

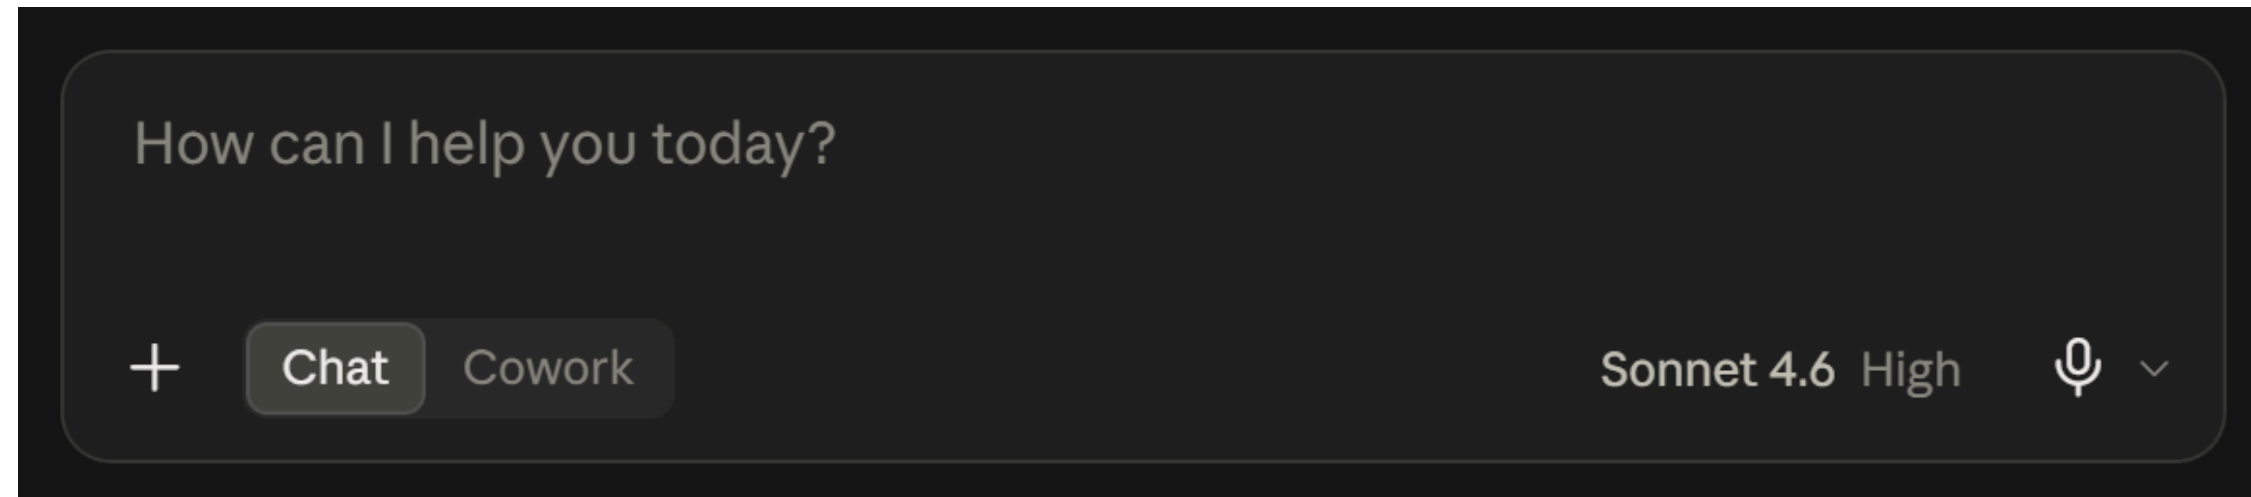

- Colors: purple #6425E9, near black, white. Use our logo when there is one.
- Tone: direct, warm, no hype, no fake urgency.
- Never use em dashes anywhere.

Effort : High

Prompt Used

I have got 4 sales files in my folder, one from each country team, and they are pretty messy. I noticed the money is in different currencies and everyone has named their columns differently. Can you sort all that out and combine them into one clean master Excel for me? Keep everything in US dollars. Also the years with us numbers look off in some of the files, so double check those against the signup dates. Do nothing else then cleaning and sorting the data and presenting me a proper file.

BUILT PROCESS

After the cleaning process prompt , In the following i given the prompt to score each customer based on their revenue

Prompt Used

Great, now using this master file, can you tag each customer as Gold, Silver, or Bronze? Base it on three things: how much they pay us, how long they have been with us, and their ease of business score. Give each of the three factors a score, add them up, and split the customers into Gold, Silver, and Bronze based on the total, Gold being our best all round customers and Bronze the weakest. Add the tier as a new column, and also add a short reason column so I can see why each customer landed where it did. Sort them properly, make it clean and easy to read, and colour code the tiers so it is easy to scan.

BUILT PROCESS

After the ranking customer based on revenue , i entered the following prompt for next phase

Prompt Used

Now in that same file, go through each customer who is gold tier (only top 10) and research them using your built-in browser to check if they have raised any fresh funding recently. We sell a cloud data and analytics platform, so I care about the ones whose funding means they are scaling up and will need more data infrastructure. Add new columns for how much they raised, when, and whether we should reach out now with a one line reason. For anyone with no funding news, mark it as nothing found.

BUILT PROCESS

Preparing Pitch deck and email for one of my top leads from that file

Prompt Used

[CompanyName] is one of my top leads from that file. They just raised [amount] and are scaling their business. Can you create a short pitch deck max 5 slides(dont keep too much text on each slide) and a cold outreach email from us to them? The angle is: congrats on the raise, here is how AtliQ Tech helps you handle the data scale that comes with this growth. Keep it sharp and tailored to them, not generic.

Here is a screenshot of our website and our brand colors and the company logo. Please restyle the pitch deck and email to match our brand, and keep adjusting until it looks right. Giving you a reference mail and screenshot of our website. Make it really good like logo and banner with proper design and boxes and footer with social logos.

Attached as a single prompt with resources file for claude to build pptx and email

STEP 2: CLEAN AND COMBINE THE FILES

RESULTS - EMAIL

A NOTE FROM ATLIQ

Congrats on the \$2.1B, Isomorphic Labs.

Hi Isla,

Congratulations on the **\$2.1B Series B**. Thrive Capital leading alongside Alphabet, GV, MGX, Temasek, CapitalG, and the UK Sovereign AI Fund is a serious statement about where IsoDDE is headed next.

Scaling AI drug design across multiple concurrent therapeutic programs means a step change in data volume, more research sites generating data in parallel, and tighter cost control as infrastructure spend grows with the pipeline. That's exactly the kind of scale-up moment we help data and analytics teams get ahead of, rather than catch up to.

WHERE ATLIQ FITS

- Unified warehousing so every new program and site plugs into one data layer
- Live BI dashboards so research and leadership see progress in real time
- Automated pipelines that onboard new data sources in days, not months
- Built-in cost controls so a bigger footprint doesn't mean runaway spend

YOUR NEXT CHAPTER

Let us size your warehousing and dashboards for the next three years, not the last two. No multi month migration.

PROPOSAL FOR ISOMORPHIC LABS

Turn Your \$2.1B Series B Into Data Infrastructure That Scales

A cloud data & analytics partner for Isomorphic Labs, as IsoDDE scales across every therapeutic program.

Prepared by AtliQ Technologies | September 2026

THE MOMENT

Put the \$2.1B to Work Before the Data Catches Up

Thrive Capital, Alphabet, GV, MGX, Temasek, CapitalG, and the UK Sovereign AI Fund just backed the next phase of IsoDDE.

What this raise means operationally

Scaling IsoDDE across multiple concurrent drug design programs means a step change in structured and unstructured biological data volume, more research sites generating data in parallel, and tighter demands on cost control as compute and data infrastructure spend grows with the pipeline.

THE RISK

Fix the Pipeline Sprawl Before It Slows You Down

Three things tend to break first when a research org scales this fast.

1

Fragmented pipelines

New therapeutic programs and sites each spin up their own data flows, and warehousing struggles to keep pace with the sprawl.

2

Slower decisions

Leadership and research teams need live visibility into program progress and spend, not static reports built days later.

3

Runaway cost

Compute and storage costs scale with every new program unless there is active, built-in cost control from day one.

THE PLAN

Scale Every Program on One Data Platform

One platform for warehousing, live dashboards, automated pipelines, and cost control.

1

Unified data warehousing

One warehouse for every program and site, so new research lines plug in without a new pipeline build each time.

2

Live BI dashboards

Real-time visibility for research and leadership teams, so decisions don't wait on a weekly report cycle.

3

Automated pipelines

New data sources onboard in days, not months, so infrastructure scales at the same pace as your pipeline.

4

Built-in cost controls

Spend guardrails baked into the platform, so a bigger data footprint doesn't mean a runaway compute bill.

AtliQ Technologies

4

Let Us Handle the Data, So You Can Scale the AI.

A 20-minute call to map your growth to a plan, then a 30-day scale test on your own data.
